Protecto Wrap

PURPOSE: To acknowledge approval of Protecto Wrap

COMMENTS:

“Protecto Wrap” is an approved product for use as a waterproofing membrane under asphalt or concrete on a wood deck when installed in accordance with its listing and product specifications.

Please note that wood deck underlayment must be nailed with ring-shank nails according to the manufacturer’s installation instructions. This may be in conflict with the nails specified for the structural diaphragm and may need to be resolved by the project engineer.
